CONTRACTORS ASSOCIATION

2018 - 2019

# Tuition Reimbursement Guide

---

Learn. Explore. Apply.

**VILLANOVA**  
**UNIVERSITY**

College of Professional Studies

# NON-CREDIT PROFESSIONAL EDUCATION

## Build Your Expertise. Increase Your Influence.

### Take an Approved Course through Villanova University\*:

- Applied Project Management: PMP Exam Prep
- Project Management Essentials
- Project Management Tools and Topics
- Facilities Management
- Sustainability for Facilities Professionals
- Supply Chain Management

Rolling admission throughout  
the year with multiple  
course start dates.

\*Course descriptions found within the book on the Villanova University page.

Dear Students,

GBCA strives constantly to expand its educational and professional development offerings even further, realizing that they both play a vital role in building a successful career in construction. Since 1961, GBCA has conducted comprehensive education and training programs to insure a highly-skilled, productive and motivated workforce. Thousands of individuals have participated in GBCA's educational programs to advance their careers in the construction industry over the last 57 years. These courses have been specifically chosen and tailored in collaboration with our university and education partners to suit individuals from entry level positions, to supervisors, to the most seasoned project managers and executives.

Employees of GBCA member companies have unparalleled access throughout the year to a variety of courses and professional development seminars, which are made possible through funding by the Industry Advancement Program (IAP). Continuously offered education and professional development programming enables construction personnel to enhance their knowledge and fine-tune skills, that will in-turn enable GBCA member companies to maintain the highest industry standards.

We encourage you to review the following course offerings and consider participating in the GBCA tuition reimbursement program. The following provides a description for each of the courses chosen for this program. You can visit our website at [www.GBCA.com/education](http://www.GBCA.com/education) to apply through GBCA or obtain more information on the schools. New eligibility restrictions were introduced last year, as our robust tuition reimbursement program continues to grow. We strive to offer our members access to the best classes and programs, so stay tuned to our website throughout the year. If you have questions not addressed in this guide, please feel free to call me at any time.

Sincerely,

*Angela Hendrix*

Angela Hendrix  
Director, Education and Professional Development  
(215) 568-7015 | [ahendrix@gbca.com](mailto:ahendrix@gbca.com)

Eligible, approved participants can receive reimbursement of up to \$2,000.00 per individual, per semester for approved courses. The maximum tuition reimbursement for each student is \$4,000 per calendar year.

## ELIGIBILITY

GBCA tuition reimbursement is available to employees, both field and firm personnel, of Active and Associate member companies and companies that contribute to the GBCA- administered Industry Advancement Program (IAP). **IAP contributors at a minimum must contribute \$2,000 per year to participate – this is measured based on the full-calendar year previous to the student's application. Apprentices regardless of trade must be in at least their 3rd year.** Do not apply for enrollment unless you are certain you can complete the course(s). If you are accepted into a course and discover that you cannot attend, notify GBCA's Education Department and the university immediately. Students who drop a class or are dropped from a class, are ineligible to receive tuition reimbursement from GBCA for one year. Tuition reimbursement is at the discretion of GBCA.

## REGISTRATION & APPROVAL PROCESS

1. You must first apply and receive approval from GBCA before enrolling with the college or university.
2. After receiving approval from GBCA you must register directly with the appropriate educational institution.
3. GBCA's Acknowledgement Form and Release of Grades must be signed and returned before the approved course begins.

## LIMITATIONS

GBCA is only responsible for the basic cost of the course and will not cover items such as text books, lab fees, etc. Tuition for out-of-state and out-of-country students or any other tuition-increasing reason is the responsibility of the student, no exceptions. Students are required to pay the educational institution or partner up front and **must receive a minimum grade of 'B' or better in order to qualify for their reimbursement.** Approved students must sign and return the Acknowledgement Form and Release of grades prior to beginning class. By participating you are agreeing to provide GBCA with an official transcript and invoice upon completion of approved course. We urge you to confirm the day and time of individual courses with each educational institution, as they are subject to change. No course substitutions will be permitted for any reason.

## REGISTRATION FORM

Construction  
Community College of Philadelphia

## COURSE NO. COURSE TITLE

### **ADC 101      Intro to Design & Construction**

This course introduces students to the fields of architecture, interior design, construction and related disciplines. Students learn basic terminology, and documentation standards and techniques. Significant factors influencing design and construction are explored, including historical precedents and design theory, interrelationships between working professionals, the financing of projects, ethical and social concerns, and physical and legal constraints. Selected current topics, such as sustainability, modular design and computer interface are discussed. This overview course provides students with a broad understanding of the design and construction fields. Students will learn contemporary methods for accessing and processing information about the design professions.

### **ADC 103      CAD Basics**

A general introduction to computer-assisted design. Students gain proficiency in the use of CAD software through creating architectural drawings. Students will learn the terminology, functions and principles of CAD operations as well as building documentation. Additionally, students will be introduced to advanced software for three-dimensional modeling, rendering and animation

**Note:** *This course focuses on the basics of Computer Aided Drafting. It is necessary for the student to take this course before moving on to ADC 163.*

### **ADC 109      Design Studio I**

This studio course introduces students to basic design principles and the manual drawing techniques which are used to graphically convey visual/architectural ideas. Delineation is the means by which students will develop an understanding of the design process. Students will learn to work in both two- and three-dimensional media.

### **ADC 112      Construction Materials and Detailing: Properties**

This course introduces students to commonly employed construction materials, from those used in excavation and foundations through framing and roofing. Materials are studied in terms of their historical uses, composition, physical properties, manufacture and assembly, applications, regulatory constraints and sustainability. Basic terminology, principles and processes in design and construction, and factors that influence material selection and material assemblies are discussed. Construction details are examined and developed. Students learn about key issues including sustainable design, new technologies and materials and the importance of effective team collaboration.

**Prerequisites:** ADC 103 or ADC 109

### **ADC 136      Construction Safety & Building Codes**

Students will learn about common construction worker safety procedures contained in OSHA regulations, lead safety procedures regulated by the EPA, and the national model building and energy conservation codes produced by the International Codes Council. The focus will be on the International Building Code (IBC), and the International Energy Conservation Code (IECC), as well as state and local adaptations of these. Requirements of the Americans with Disabilities Act (ADA) are also studied.

### **ADC 146      Construction Supervision and Business Practices**

In this course, students will study the organization and operations of a small construction firm, a unit within a larger construction firm, and a facility management department. Topics will include business organization and operations, finance and administration, marketing, code compliance, contract bidding, and construction risk management. Supervision and human relations skills needed by those in supervisory and leadership roles are also studied. Leadership skills and problem solving are emphasized.

**Prerequisite:** ADC 101.

## **ADC 159      Design Studio II**

This studio design course helps students master techniques used to develop and graphically convey architectural ideas, primarily using computer modeling. Students develop an understanding of the design process related to space through digital and manual delineation.

**Prerequisites:** ADC 103 and ADC 109.

### **ADC 160 Presentation Techniques**

Introduction to materials and methods in the preparation of architectural presentations, drawings and models. Computer modeling and composition software will be introduced, and students will produce a portfolio with digital and manual pieces. Emphasis is placed on using technique and craftsmanship to make design intent clear and compelling.

**Prerequisites:** ADC 103, ADC 109

## **ADC 161      Introduction to Building**

Students learn to perform traditional energy audits on buildings as well as comprehensive, whole-home assessments with diagnostic equipment. Students will learn to diagnose critical performance factors in buildings and increase the energy efficiency of the building and the comfort, health and safety of the building's occupants. Students learn to identify major energy related problems and prioritize solutions based on building science principles and cost-benefit analysis. Successful students will be prepared to sit for the Building Performance Institute's (BPI) Building Analyst (BA) Certification examination.

**Prerequisite:** ADC 101

## **ADC 163      Digital Documentation in Architecture and Construction**

An introduction to architectural construction documents, the process by which they are developed, and their use and function in the progression of design through construction. Students learn to use parametric software (such as Architectural Desktop) and industry standard symbols, terminology and graphics in the development of a complete set of construction documents. Additionally, students learn to utilize and apply advanced software features to increase productivity and accuracy.

**Prerequisite:** ADC 103.

*Note: For someone who uses CAD regularly and would like to learn Revit for BIM (Building Information Modeling), ADC 163 is appropriate.*

## **ADC 186      Surveying**

Basic course in site surveying as it applies to building construction. Emphasis is placed on skill development using the builder's level and transit and on computer-based applications for site design. Course work includes fieldwork exercises in measurement, differential leveling and topographic surveying.

**Prerequisite:** ADC 101.

### **ADC 212      Construction Materials and Detailing: Methods**

This course introduces students to a comprehensive range of construction materials, techniques and systems commonly employed in the construction and finishing of buildings and spaces, from interior finishes and treatments (including lighting, color and acoustics) through exterior cladding or enclosures. Materials are studied in terms of their composition, physical properties, manufacture and assembly, applications, regulatory constraints and sustainability.

**Prerequisite:** ADC 103 or ADC 109.

### **ADC 226      Structures I - Analysis**

Study of the principles of statics and strength of materials as they pertain to the design of statically determinant structures. Course work includes the concepts of unit stress, strain, deformation and moment of inertia. End reactions, shear and moment diagrams are developed for simple beams.

**Prerequisites:** ADC 101 and MATH 118 or higher.

### **ADC 227      Structures II – Design**

Introduction to the means and methods employed in the design of structural members, including beams, columns, trusses and connections. Course work consists of structural applications for timber, steel and concrete.

**Prerequisite:** ADC 226.

### **ADC 236      Construction Cost Estimating I**

Introduction to quantification of building components including blueprint reading, take-offs and application of unit costs.

**Prerequisite:** ADC 101.

### **ADC 237      Construction Cost Estimating II – Computer Methods & Cost-Benefit Analysis**

This is the second of two courses that cover the principles and practice of construction cost estimating. It builds on the first course (ADC 236), using computerized methods to produce the detailed cost estimates that contractors use to determine the cost of construction for commercial and residential projects. The course covers the role of estimating and bidding in the construction industry. It also introduces cost-benefit analysis, which encourages sustainability by determining the true cost and value of a building throughout its life.

**Prerequisite:** ADC 236.

### **ADC 246      Contracts & Specifications**

Study of the purposes, structure and provisions of contemporary construction industry contracts. Relationships among owners, architects and other design professionals, general and subcontractors, and vendors and suppliers are reviewed in detail. Students learn to adjust standard contract formats and specifications to tailor them for individual projects, according to C.S.I. procedure.

**Prerequisite:** ADC 101.

### **ADC 253      Environmental Systems I**

An overview of environmental control systems used in modern buildings, focusing on mechanical, electrical, and plumbing systems. Students will gain a basic understanding of and foundation in these systems and their design. Through application and practice, students will learn the interrelationships between systems and approaches to integrating them into building design and construction.

**Prerequisite:** ADC 101 and ADC 103 or ADC 109.

### **ADC 254      Environmental Systems II**

Components and systems used to control the environment of modern buildings are studied, expanding student's knowledge of Mechanical, Electrical, and Plumbing (MEP) systems. Specialized building systems are also studied, including fire protection, vertical systems, signaling, and communication. Additionally, students will gain an understanding of specialized topics related to sustainability, including alternatives to traditional MEP systems. Students will become prepared for the LEED Green Associate Examination.

**Prerequisite:** ADC 101 and ADC 103 or ADC 109

### **ADC 261      Construction Management and Scheduling**

This course is a thorough survey of the construction project management process from initial conception to completion. Topics include feasibility analysis, siting/staging issues, software application, personnel management, contractual procedures and job-site safety. Students will be introduced to basic contractor operations, project administration, job planning and Critical Path Method scheduling. After building a conceptual base, students will apply their scheduling knowledge to simulated projects. In this latter phase of the course students will use the most current and prevalent project planning software.

**Prerequisite:** ADC 246.

## **ADC 286      Building Rehabilitation and Energy Retrofit**

This course will examine three integrally related topics: 1) the re-development process by which existing building stock is rehabilitated, 2) construction issues specific to the rehabilitation of existing buildings and 3) energy retrofit, which includes sustainability and related strategies. ADC 286 will introduce students to a broad array of tools, including construction management techniques and methods, energy audits and retrofits as well as public and private financing options and project management relative to building rehabilitation for both small and large scale projects, especially in urban neighborhoods.

**Prerequisite:** ADC 101

- **REGISTRATION:** Students who have never taken a class at CCP must apply to be a student and should identify themselves as a “guest” student. Contact David Bertram, [dbertram@ccp.edu](mailto:dbertram@ccp.edu) or Tony Palimore, [apalimore@ccp.edu](mailto:apalimore@ccp.edu) with questions. Students who have taken classes here before can register online.
- All of the courses listed above are undergraduate and would count towards the 63 credits needed to receive an Associate degree in Applied Science from the Community College of Philadelphia. Courses also count when transferring to most four-year colleges or universities.

COURSE NO. COURSE TITLE

**CMGT 101 Intro to Construction Mgmt.**

This course will introduce the basic history and management concepts of the construction industry to students with the expectation that upon completion students will have an overview of the industry. Career choices, industry firms, and key players in the Construction Management process will be explored.

**CMGT 161 Building Materials & Constr. Methods I**

This course is designed to explore the range of building materials in use today and their interrelationships in a construction project. Topics will include a study of the major components of construction materials, the selection process, specification, alternatives, procurement, placement and quality management for the building systems covered. Foundations, excavations, wood framing and steel construction and the role these materials play in the success of a project once chosen will be considered and evaluated.

**CMGT 162 Building Materials & Constr. Methods II**

Continues CMGT 161. Covers concrete, reinforced concrete, site cast and pre-cast concrete, brick and concrete masonry, reinforced masonry, and properties of these materials & construction methods associated with them.

### **CMGT 240 Economic Planning for Construction**

Covers techniques for economic decision making for building and infrastructure construction topics. Topics include cash flow, present worth analysis, equivalent annual worth, rate of return, risk analysis, and benefit/cost analysis.

### **CMGT 261 Construction Safety**

Covers OSHA liability, general safety, hazard communication, fire, material handling, tools, welding, electricity, scaffolding, fall protection, cranes, heavy equipment, excavation, concrete, ladders and stairways, confined space entry, personal protective equipment, and health hazards. Course approved by the OSHA Training Institute.

### **CMGT 262 Building Codes**

Familiarizes students with the content of the BOCA International Building Code (emphasizing the non-structural provisions), the purpose and intent of code requirements, and how to apply the code to structures and occupancies. Examines how the code is used as a tool in design and construction and prepares students for the advent of a single model building code planned for the nation.

### **CMGT 263 Understanding Construction Drawings**

This course examines a variety of construction documents, including drawings, details, graphic standards, sections, and quantities for competitive bidding and execution of projects. Both residential and commercial construction documents will be examined.

### **CMGT 265 Information Technologies in Construction**

The objective of this course is to expose students to a large variety of information technologies in construction and will discuss the impact of these technologies on work environments, processes, and work quality. Students will investigate a variety of issues surrounding IT in construction including implementation, standards, integration, knowledge management and the underlying technology.

### **CMGT 266 Building Systems I**

This course covers construction management and design concepts relating to heating, ventilation, and air conditioning systems and the integration of these systems into the building design and construction process.

### **CMGT 267    Building Systems II**

Continues CMGT 266. This course covers construction management concepts relating to electrical systems, wiring, lighting, signal and data systems, and transportation systems and the integration of these into the building design and construction process.

### **CMGT 270    Principles of Statics for Construction Managers**

This algebra-based course is the study of forces acting upon structural elements. Analytic and graphic methods are used to illustrate resultants and reactions, equilibrium, centroids and moments of inertia applied to static structures. Analysis includes, stress, strain, axial loading, bending, and deflection of beams.

### **CMGT 355    Introduction to Sustainability in Construction**

An overview of the design and construction of high performance buildings. Students will gain topical familiarity with the wide range of issues related to sustainable design and construction. The USGBC's green building certification program will be covered in detail. Both historical and contemporary case studies will be utilized.

### **CMGT 361    Contracts & Specifications I**

Analyzes construction contracts, specifications, and practices with regard to business law and liability. Required for construction management students. Elective for others.

### **CMGT 362    Contracts & Specifications II**

Continues CMGT 361. Examines contractor, architect, and engineer responsibilities through case studies and class discussions.

### **CMGT 363    Estimating I**

Covers discussion of the estimating function and review and applications of material quantity survey techniques used in estimating costs of construction projects. Includes types of approximate and precise methods of estimating and their uses, and computer applications. Required for construction management students

### **CMGT 364    Estimating II**

Covers pricing and bidding of construction work including cost factors, labor and equipment, productivity factors, prices databases, job direct and indirect costs, methods of estimating time, materials, equipment, subcontractors' work, general expenses, and profit, bid preparations and submission, and computer applications.

### **CMGT 365 Soil Mechanics in Construction**

Gives an overview of the types of problems encountered in geotechnical construction. Subjects covered will be composition, groundwater fundamentals, settlement and consolidation, stability of earth slopes, types of foundations and behavior of difficult soils.

### **CMGT 371 Structural Aspects in Construction I**

The first of two course series designed specifically for construction management majors. The sequence addresses the interactions of different kinds of loads with common structural elements and design considerations for typical construction materials. This course places emphasis on the design of wood framed construction.

### **CMGT 372 Structural Aspects in Construction II**

The second part in a two-course sequence for Construction Management majors. The course places emphasis on the design and analysis of concrete and steel frame construction.

### **CMGT 375 Building Information Modeling in Construction**

This course is intended to provide students with a hands-on introduction to Building Information Modeling (BIM) in Construction. Emphasis will be placed on the use of BIM to support current construction activities such as design review, coordination, scheduling, logistics, estimating, and project close-out. Topics will include an introduction to 3D BIM modeling, 3D coordination and clash detection, 4D visual scheduling and logistics, 5D estimating, and BIM for Facility Management. Students will learn the fundamentals of the most widely used software applications in the construction industry: SketchUp, Revit and Navisworks.

### **CMGT 385 Selling and Negotiation Techniques in Construction**

Principles and techniques of marketing communications and selling projects, products, systems, and services in the construction marketplace. Major topics include: effective communication and interpersonal relations, conducting construction specific market research and creating a marketing plan, building your brand and media strategies, promoting and enhancing the perceived value of services provided, connecting and collaborating with customers, writing persuasive proposals and negotiating strategies and tactics, legal and ethical considerations.

### **CMGT 450 Management of Field Operations**

This course is intended to equip students with knowledge and skills required to successfully manage and support construction field operations. Knowledge areas include contract administration, project engineering, site superintendence, and other topics critical to field operations.

### **CMGT 451 Heavy Construction Principles & Practices**

This course is intended to provide students an introduction to the principles and practices employed in heavy construction. The course content is presented from a practical perspective focusing on actual field applications.

### **CMGT 461 Construction Management**

Covers construction management concepts and practices, the management system, construction planning and programming, project control, environmental management, total quality management, and ethics in construction management.

### **CMGT 463 Value Engineering**

The first of two course series designed specifically for construction management majors. The sequence addresses the interactions of different kinds of loads with common structural elements and design considerations for typical construction materials. This course places emphasis on the design of wood framed construction.

### **CMGT 465 Marketing Construction Services**

Applies marketing principles to the construction industry. Includes understanding the roles of market research, business development planning, and networking techniques. Students will acquire the skills and techniques to prepare a winning presentation.

### **CMGT 467 Techniques of Project Control**

The first of two course series designed specifically for construction management majors. The sequence addresses the interactions of different kinds of loads with common structural elements and design considerations for typical construction materials. This course places emphasis on the design of wood framed construction.

### **CMGT 468 Real Estate**

Overview of the development process including site selection, residential densities, market analysis and cash flow analysis.

### **CMGT 469 Construction Seminar: Contemporary Issues**

This course is intended to prepare students for professional practice through a survey of the current and future state of the industry.

### **CMGT 485 Habits of Successful Design and Build Construction**

The course develops specific and essential skills necessary for success within the construction workforce and project environments. Students will learn to convert virtues to habits for life and career success in the challenges of the construction industry. Strategic skills in planning and scheduling, information handling, critical event completion, problem solving, negotiating, and team building techniques crucial to the construction process will be analyzed and developed.

### **CMGT 499 Construction Management Independent Study Project**

This course is a capstone course intended to be a culminating experience in the Construction Management Program.

## UNDERGRADUATE CERTIFICATE PROGRAMS

<http://catalog.drexel.edu/undergraduate/collegeofengineering/constructionmanagementcert/>

### CONSTRUCTION MANAGEMENT I – FUNDAMENTALS

(18.0 quarter credits)

The Certificate introduces students to the basic concepts of the construction industry.

Requirements

- CMGT 101**    **Introduction to Construction Management**
- CMGT 161**    **Building Materials and Construction Methods I**
- CMGT 162**    **Building Materials and Construction Methods II**
- CMGT 163**    **Building Materials and Construction Methods III**
- CMGT 261**    **Construction Safety**
- CMGT 263**    **Understanding Construction Drawings**

### CONSTRUCTION MANAGEMENT II - CONSTRUCTION SCIENCE

(18.0 quarter credits)

This certificate focuses on introducing students to design concepts relating to heating, ventilation, and air conditioning systems and the integration of these systems into the construction process. In addition, the certificate also covers the process of estimating as well as building codes involved in construction projects.

Requirements

- CMGT 266**    **Building Systems I**
- CMGT 267**    **Building Systems II**
- CMGT 363**    **Estimating I**
- CMGT 364**    **Estimating II**

Select two of the following:

- CMGT 240**    **Economic Planning for Construction**
- CMGT 262**    **Building Codes**
- CMGT 265**    **Information Technologies in Construction**

## Requirements

- CMGT 101**    **Introduction to Construction Management**
- CMGT 161**    **Building Materials and Construction Methods I**
- CMGT 162**    **Building Materials and Construction Methods II**
- CMGT 163**    **Building Materials and Construction Methods III**
- CMGT 261**    **Construction Safety**
- CMGT 263**    **Understanding Construction Drawings**

## **CONSTRUCTION MANAGEMENT III - MANAGEMENT CONCEPTS**

(19.0 quarter credits)

This certificate focuses on construction contracts, specifications, and practices with regard to business law and liability. The certificate also covers value engineering and construction planning, scheduling, network systems, as well as the communications required for project control and claims prevention.

## Requirements

- CMGT 361**    **Contracts And Specifications I**
- CMGT 362**    **Contracts and Specifications II**
- CMGT 461**    **Construction Project & Company Management**
- CMGT 463**    **Value Engineering**
- CMGT 465**    **Marketing Construction Services**
- CMGT 467**    **Techniques of Project Control**

## **CONSTRUCTION MANAGEMENT IV - CUSTOMIZED INDEPENDENT**

(18.0 quarter credits)

This certificate is designed to allow students to choose the higher-level courses that best suit their special needs and interests. Students must select all six of their courses at the start of the Certificate program.

**Requirements:** A minimum of six (6) 300-level or higher approved CMGT courses.

Students interested in continuing their education after certification are able to apply their coursework and credits directly to the Bachelor of Science in Construction Management.

## MASTER'S IN CONSTRUCTION MANAGEMENT (45 quarter credits)

Required:

### Core Classes

(15 credits)

CMGT 501 Leadership in Const  
CMGT 505 Const Acct & Fin Mgmt  
CMGT 510 Const Control Tech  
CMGT 512 Cost Est& Bidding  
CMGT 515 Risk Mgmt in Const

### Culminating Experience

(6 credits)

CMGT 696 Capstone Part I  
CMGT 697 Capstone Part II

Concentration Options:

### Project Management

(24 credits)

CMGT 525 Appl Const Project Mgmt  
CMGT 528 Const Contract Admin  
CMGT 530 Equip App & Economy  
CMGT 532 International Const Pract  
CMGT 538 Strategic Mgmt in Const  
CMGT 540 Schedule Impact Anal  
CMGT 548 Quality Mgmt & Perform  
CMGT 550 Productivity Analysis

OR

### Real Estate (select any 8 courses)

(24 credits)

REAL 568 Real Estate Development  
REAL 571 Adv. Real Estate Invest.  
REAL 572 Adv. Market Research  
REAL 573 Sales & Market Real Est  
REAL 574 Real Estate Econ Urban  
REAL 575 Real Estate Finance  
REAL 576 Real Estate Valuation  
REAL 577 Legal Issues in RE  
CMGT 535 Comm Impact Anal

OR

### Sustainability & Green Construction

(24 credits)

CMGT 535 Comm Impact Anal  
CMGT 545 Sustainable Prin& Prac  
CMGT 546 Sustainable Tech  
CMGT 547 LEED Concepts  
CMGT 558 Community Sustain

\*Sustainability and Green Construction Concentration Electives: Graduate CMGT and REAL courses are acceptable selections. With permission and space permitting, students may also choose graduate courses in the areas of specific related study from Environmental Engineering (ENVE), Environmental Science (ENVS).

## GRADUATE CERTIFICATE PROGRAMS

### CONSTRUCTION MANAGEMENT GRADUATE CERTIFICATE

(18.0 quarter credits)

<http://online.drexel.edu/online-degrees/business-degrees/cert-construction-management/index.aspx>

#### **CMGT 510 Construction Control Techniques**

This course addresses the knowledge and skill sets required to successfully plan and control complex construction projects. Topics include procurement and contracts, pre-bid planning, contract budgets and cash flow, and planning case studies.

#### **CMGT 512 Cost Estimating & Bidding Strategies**

This is an advanced course in construction estimating addressing competitive bidding strategies. Topics include profit objectives, analyzing the competition, and determining optimum combo of price, cost and volume.

#### **CMGT 515 Risk Management in Construction**

This course presents risk management techniques and practices specific to construction projects. Students will gain an understanding of the risks stemming from technical and business sources related to the construction process, and to identify, quantify, and develop the appropriate response strategies.

#### **CMGT 525 Applied Construction Project Management**

This course presents the knowledge and skills required to successfully manage complex construction projects. Topics include the project management hard skills such as estimating and budgeting, time management, and planning.

#### **CMGT 528 Construction Contract Administration**

This course introduces the managerial and legal aspects of construction contract administration. The student is introduced to basic concepts of contract law employed in construction and the rules of interpretation. Topics include changes and change orders, disputes, differing site conditions, and defective documents.

#### **CMGT 538 Strategic Management in Construction**

This course presents concepts in strategic management within construction organizations. Topics include clients/constructors/competencies, portfolio management, and marketing strategies for construction firms.

## **REAL ESTATE GRADUATE CERTIFICATE** (18 quarter credits)

<http://online.drexel.edu/online-degrees/business-degrees/cert-realestate/index.aspx>

### **CMGT 538 Strategic Management in Construction**

REAL 568 - Real Estate Development

This course will provide a comprehensive exploration of the development process for real estate development projects. Residential, multi-family, single family, apartments, office buildings, retail projects, industrial developments and the development process for each market segment.

### **CMGT 538 Strategic Management in Construction**

REAL 571 - Advanced Real Estate Investment & Analysis

This course will explore the market analysis and feasibility methods in framing and supporting investment decision making for real estate projects. Detailed market analysis strategies will be employed and case studies will be analyzed to deepen the student's knowledge and judgment for investment decision making.

### **CMGT 538 Strategic Management in Construction**

REAL 572 - Advanced Market Research & Analysis

This course will explore the market research methods used to understand and dissect geographical and demographical real estate markets. Detailed market research strategies will be employed and case studies will be analyzed to deepen the student's knowledge of market research techniques and resources.

### **CMGT 538 Strategic Management in Construction**

REAL 575 - Real Estate Finance

This course will focus on the options and implications of different financing methods with the unique tradeoffs associated with each considered.

### **CMGT 538 Strategic Management in Construction**

REAL 577 - Legal Issues in Real Estate Development

This course will explore the unique legal requirements of the real estate business including property rights, involuntary transfers, easements, private restrictions, public restrictions, zoning and land development laws.

Select one of the following:

**REAL 573      Sales & Marketing of Real Estate**

This course will explore the strategies for successful marketing of real property based on market research and development strategies.

**REAL 574      Real Estate Economics in Urban Markets**

This course will offer a unique and detailed perspective on urban real estate development and the special sub-markets in which they exist. Attention will be given to the characteristics of the particular economic factors relevant in urban real estate markets.

**REAL 576      Real Estate Valuation & Analysis**

This course will introduce the concepts of real estate valuation, appraisals, and the relationship of these to financing and cash requirements.

**SUSTAINABILITY AND GREEN CONSTRUCTION GRADUATE CERTIFICATE**

(18 quarter credits)

<http://online.drexel.edu/online-degrees/business-degrees/grad-cert-sustainability-greenconstruction/index.aspx>

**CMGT 535      Community Impact Analysis**

This course provides an overview of community impact assessment, including the benefits of conducting such an assessment. It also provides general guidelines for conducting a community impact assessment, including the types of impacts that should be assessed during the process and related issues.

**CMGT 545      Sustainable Principles & Practice**

This course addresses the fundamentals of green building concepts and practices underlying sustainable construction from a perspective of the LEED Green Building rating system.

**CMGT 546      Sustainable Technology**

This course addresses the sustainable technologies in the built environments and is presented as a whole building design system. The course is organized into three major categories — Design Guidance, Project Management, and Operations & Maintenance.

## **CMGT 547 LEED Concepts**

This course addresses the fundamental concepts and practices underlying the LEED Green Building rating system.

## **CMGT 558 Community Sustainability**

This course provides clear direction to students to design cities and developments that are sustainable and reduce environmental harms.

### Admission/Registration:

- The B.S. in Construction Management program requires the completion of 186 credit hours most of which are face to face offerings. If a student wishes to pursue a Bachelor's degree or undergraduate certificates in Construction Management as a full-time, part-time or transfer student they must apply for admission into Drexel University. For information on how to apply for undergraduate studies at Drexel, please visit <http://www.drexel.edu/undergrad/> or call 215-895-2400. Once accepted into Drexel and the Construction Management program, students will be assigned an academic advisor that will help them with registration.
- Students wishing to pursue the online graduate certificates or the Master's in Construction Management must apply to Drexel University as well. For more information on how to apply for the fully online graduate certificates and Master's in Construction Management, please visit <http://online.drexel.edu/>. GBCA members must enter their organization's affiliation code GBCA on their application to qualify for their tuition reduction. Once accepted and admitted in the program, students may contact academic advisor Jessica Cruz (215-895-5943) for help with registration.
- Drexel University offers tuition support to military members through the Yellow Ribbon Program. More information can be found at the following link: <http://drexel.edu/drexelcentral/finaid/financing/veterans/yellow-ribbon-program/>
- Classes dates and times are subject to change. Questions can be directed to Jessica Cruz at [jc635@drexel.edu](mailto:jc635@drexel.edu).

## UNDERGRADUATE-LEVEL COURSES

COURSE NO. COURSE TITLE

**PROJ 101 Project Management for All**

Essentials of managing projects and application of planning, monitoring and controlling techniques throughout the project life-cycle. Students learn the hands-on fundamentals of project management that enhance their ability to support projects in their current or future organizations in any field. Open to students in all disciplines.

**PROJ 401 Introduction to Project Management**

This course examines design, appraisal, planning, and implementation of a project. It provides in-depth analysis of approaches to managing projects in both public and private sectors.

**PROJ 402 Essentials of Project Planning & Scheduling**

This course will prepare students to apply relevant concepts in project planning, scheduling and control. Project scheduling methods are covered including: bar (Gantt) charts, network diagrams, critical path method, three-point estimates, critical chain concepts, resource allocation, resource leveling, and earned value management.

### **PROJ 403     Essentials of Project Leadership and Teamwork**

This course will examine the organizational environment required for building and maintaining successful project teams. It prepares and provides guidance to project team members and managers to use human resources effectively through good management, wise leadership, and meaningful communications.

### **PROJ 410     Essentials of Project Quality Management**

This course will examine basic quality concepts, tools, and techniques, and explore the sub-processes of quality management: quality planning, quality assurance, and quality control as they relate to project management.

### **PROJ 415     Essentials of Project Estimation & Cost Management**

This course will provide an overview of basic project financial and economic principles involved in managing projects. It is intended to familiarize project team members and managers with relevant methods, tools, and techniques in project cost estimation, budgeting, cost forecasting, and cost control.

### **PROJ 420     Essentials of Project Risk Assessment & Management**

This course will examine the major risk factors throughout various phases of the project life cycle. It considers the overall project planning process, describes key concepts of project risk planning, highlights relevant tools and techniques for risk identification, explores the use of risk assessment methods, and emphasizes risk and opportunity response strategies.

### **PROJ 430     Essentials of Managing Multiple Projects**

This course will examine the management principles, tools, and techniques required to manage multiple projects. Emphasis is placed on functions of the project management office (PMO) and practices of project and program portfolio management.

### **PROJ 435     Essentials of International Project Management**

This course will examine the adaptation of project management principles and methods when operating in an international environment. It investigates cultural, legal, ethical, and financial factors in the context of managing international projects.

### **PROJ I199-I499 Independent Study in PROJ**

Self-directed within the area of study requiring intermittent consultation with a designated instructor.

### **PROJ T180-T480 Special Topics in PROJ**

Topics decided upon by faculty will vary within the area of study.

## **GRADUATE-LEVEL COURSES**

### **PROJ 501 Introduction to Project Management**

This course will prepare students to manage scheduling, supply management, project team recruiting, resource allocation, time/cost tradeoffs, risk assessment, task coordination, team-building, progress monitoring, and post-project assessment through a comprehensive overview of project management. Case studies are used to illustrate the principles and tools of project management as a process.

### **PROJ 502 Project Planning & Scheduling**

This course will prepare students to master concepts in project planning, scheduling and control. Project scheduling methods are covered including: critical path systems, critical chain scheduling, statistical analysis, Program Evaluation Review Technique, linear resource leveling, and legal ramifications on contracted projects.

### **PROJ 510 Project Quality Management**

Quality management is related to project management. Examines basic quality concepts and explores the three sub-processes of quality management: quality planning, quality assurance, and quality control as they relate to project management.

### **PROJ 515 Project Estimation & Cost Management**

This course will provide an overview of project financial and economic principles involved in product and system development. It is intended to familiarize project managers with methods in project accounting, budgeting, cost estimation, financial management, design optimization, and economics.

### **PROJ 520    Project Risk Assessment & Management**

Examines the risk factors throughout every phase of a project. Looks at the overall project planning process, explores the use of high-level risk assessment tools, and describes key ideas for project risk planning. Models for risk analysis, assessment, and classification are presented.

### **PROJ 525    E-Tools for Project Management**

This course will examine the use of electronic tools as a means of creating a virtual workplace. Issues related to the use of the e-tools for collaboration and decision making for project management will be explored.

### **PROJ 530    Managing Multiple Projects**

Examines the complex and simultaneous management principles and techniques required to manage multiple projects. Emphasis is placed on a theory and practice of project management that is rigorous and disciplined, yet flexible.

### **PROJ 535    International Project Management**

Examines the uniqueness and adaptations of project management when operating in an international context. Details the investigation of cultural, legal, and regulatory environments as the context of international project management.

### **PROJ 540    Project Procurement Management**

Examines role of procurement in project management including processes and activities needed to acquire products, services and results required to accomplish a project from outside the project organization. Planning, conducting administering and closing procurements are course components as are relevant legal and ethical issues, contract capacity, authority, public and private bidding processes and dispute resolution methods.

### **PROJ 603    Project Leadership and Teamwork**

Examines project leadership skills required for building and maintaining successful high-performance project teams. Prepares project managers to facilitate teamwork through good management and wise leadership.

**PROJ 645 Project Management Tools**

Examines theories relating to project management software acceptance, use of project management tools, and how tools relate to project success. Develops in-depth skills in a widely-used project management software package, and provides exposure to other selected project management tools for successful collaboration in collocated and virtual project teams.

**PROJ 650 Project Stakeholder Management**

Examines theories and processes required to identify the individuals, groups, organizations, and other stakeholders that could impact or be impacted by a project. Also covers analyzing stakeholder expectations and their influence on the project, and developing strategies for engaging project stakeholders in effective project decisions to ensure successful project outcomes.

**PROJ 665 Managing Project Knowledge**

Examines how knowledge services are designed, developed, and implemented within an organization and a project. The goal is to build expertise with knowledge management materials and skills needed to succeed in building an effective knowledge strategy within a project, a program, and an organization. Students learn strategies for building knowledge services, including the theories, models, methods, processes, and social factors that promote successful change.

**PROJ 670 Project Management Methodologies: Managing Project Lifecycles**

Examines project management methodologies, including Project Management Institute (PMI)<sup>®</sup> global standards, Agile, PRINCE 2, SCRUM, ITIL, and other leading methodologies. Reviews how project lifecycles are designed, developed, and implemented within a project and across the organization. Builds knowledge and expertise with major project management methodologies and materials and develops skills needed to select, adapt, and apply an effective strategy for a project, a program, and an organization. Students learn strategies for managing projects throughout their lifecycles, including the theories, models, methods, processes, and other factors that enhance project success.

**PROJ 695 Capstone Project in Project Management**

Provides an opportunity for the student to successfully integrate knowledge and skills acquired during their master's program in project management. Students will evaluate the project management practices in an organization and create a report that identifies strengths and weaknesses in an organization and recommend strategies for improvement.

### **PROJ I599-I799 Independent Study in Project Management**

Provides individual study or research in project management under faculty supervision. Course may be repeated for credit.

### **PROJ T580-T780 Special Topics in PROJ**

Topics decided upon by faculty will vary within the area of study.

## **PROGRAM OFFERINGS IN PROJECT MANAGEMENT**

### **Graduate Certificate in Project Management**

18.0 credits (6 courses: 5 required plus 1 elective)

<http://catalog.drexel.edu/graduate/collegeofengineering/projectmanagementcert/>

The graduate certificate in Project Management, a part-time, fully-online program, is designed to support the growing need for project management graduate education. It provides students with the knowledge necessary for successful professional and leadership careers in the rapidly-expanding field of project management and will prepare students to pursue the Certified Associate in Project Management (CAPM)<sup>®</sup> or Project Management Professional (PMP)<sup>®</sup> credential from the Project Management Institute (PMI). GBCA members can receive a discount by visiting <http://gbca.com/education/drexel-university-online-partnership>.

### **M.S. in Project Management**

45.0 credits (15 courses: 11 required plus 4 elective)

<http://catalog.drexel.edu/graduate/collegeofengineering/projectmanagement/>

The Master of Science (MS) in Project Management, a part-time, fully-online program, is designed to equip professionals with the knowledge expected of project managers in any field. The course content is mapped to the internationally-recognized Project Management Institute's (PMI) A Guide to the Project Management Body of Knowledge (the PMBOK Guide)<sup>®</sup>. GBCA members can receive a discount by visiting <http://gbca.com/education/drexel-university-online-partnership>.

Earn a Graduate Certificate in Construction Management while pursuing your MS in Project Management through the use of electives.

Contact **Mercedes Moultrie** for more information [mm342@drexel.edu](mailto:mm342@drexel.edu).

Non-matriculated students - Students interested in taking undergraduate-level courses, but not seeking a degree, must apply for admission to the University. Please contact John Rans, Sr. Academic Advisor, Goodwin College, at 215-571-3810 or via email at [jrr36@drexel.edu](mailto:jrr36@drexel.edu) for more information about how to apply and register for classes.

Admission to the Graduate Certificate or M.S. in Project Management - Students wishing to pursue the online Graduate Certificate in Project Management or the M.S. in Project Management should visit the Drexel University Online website (<http://online.drexel.edu/>) for admissions criteria and to apply. NOTE: GBCA members should enter the organization affiliation code GBCA on their application to qualify for the tuition reduction.

*PMI, CAPM, PMP, and PMBOK Guide are registered marks of the Project Management Institute, Inc.*

## PROJECT MANAGEMENT PROGRAM FEATURES

- Part-time, starting in fall, winter, or spring
- Courses in the Graduate Certificate and M.S. are offered every term and are offered entirely on-line, so they can be completed ANYWHERE
- All students have access to Drexel facilities, technical support, services, libraries, and software
- The Graduate Certificate can be completed in as little as 1 year
- Effective fall 2016, the Graduate Certificate has been declared eligible for financial aid by the U.S. Department of Education
- Courses from the certificate can be applied toward the M.S. in Project Management
- The M.S. can be completed in as little as 2 years
- Interested students have the opportunity to pursue dual M.S. degrees
- Use electives to complete a graduate minor or graduate-level certificate in an area of interest

### **Drexel's Project Management Program: A PMI® Registered Education Provider (R.E.P.)**

The Project Management program in the College of Engineering at Drexel University is approved by the Project Management Institute (PMI) as a Registered Education Provider (R.E.P.). This designation indicates that Drexel has met or exceeded rigorous standards for the quality and the effectiveness of its program as defined by PMI. As a result, PMI has authorized Drexel to issue professional development units (PDUs) to meet the education requirements needed by PMI credential holders.

This designation has many benefits to the project management student. An alignment with PMI, the world's largest project management association, provides a verified focus of the course material and learning outcomes so that the student is assured an optimal experience. All courses must be current and align with PMI's Global Standards assuring quality of content leading to the student's professional development.

For more information about the Project Management Institute, visit [www.pmi.org](http://www.pmi.org).

**CONTACT** Randy Ingbritsen  
Continuing Education Representative

Email: rxi3@psu.edu

COURSE NO. COURSE TITLE

**PM 01 Project Initiation & Planning**

This course introduces the student to the project management process; the role of the Project Manager; project communications, and project leadership. It begins the planning process covering topics such as the objectives, scope, and success criteria. This is the first of four courses required for the Certificate in Project Management.

**PM 02 Project Scheduling & Integration**

This course continues to build upon the lessons learned in “Project Initiation and Planning”. Content covers the work breakdown structure, project schedule, PERT/GANTT/CPM methods, and project integration. This is the second of four courses required for the Certificate in Project Management.

**Prerequisite:** Project Initiation and Planning (BA297D)

**PM 03 Project Management Costing & Control**

To understand the cost estimating techniques, earned value analysis, change management, and lessons learned. Specific course objectives include: Understanding the project management discipline; Creating a cost estimate and cost baseline; Addressing project changes; Project reporting; Conducting lessons learned.

**Prerequisite:** Project Scheduling and Integration (BA297E)

## **PM 04            Project Risk and Management**

To understand the related project management risks, creating a risk register, and to understand how to manage a project. Specific course objectives include: understanding the project management discipline; risk identification; qualitative and quantitative risk analysis; project management skills; ethics in project management.

**Prerequisite:** Project Management Costing and Control

- **PLEASE NOTE: THE PROJECT MANAGEMENT CERTIFICATION CLASSES MUST BE TAKEN IN SEQUENCE.** Disclaimer: PMI and PMP are registered trademarks of the Project Management Institute, Inc.
- Registration is now open. Penn State Abington-Ogontz Campus is located at 1600 Woodland Road, Abington, PA 19001. Register by phone at: 215-881-7389 Monday - Thursday 8:00 a.m. - 9:00 pm; Friday until 4:30 pm or fax: 215-881-7317. Contact Robin Burgess at 215-881-7401 with any questions. Also check dates for classes as they are subject to change.

# Lead the Way from Project Inception to Close-Out.

Gain a broad understanding of construction technology, business, architecture and engineering with a focus on building quality projects safely, on time, within budget, and to customer expectations. Enroll at Jefferson to get started in this growing industry:

**BS in Construction Management**

---

**MS in Construction Management Online**

---

**MS in Construction Management On-Campus**

---

**MS in Construction Management & Sustainable Design**

COURSE NO. COURSE TITLE

**CMGT-102 Introduction to the Construction Industry**

Through analysis of relevant case studies, this course examines construction management concepts and principles as applied to contemporary practice and investigates the intersecting roles of construction manager, architect, client, and general contractor. Topics include planning, programming and documentation from pre-construction to project close-out; legal aspects relative to environmental protection, public and worker safety, contract documents, insurance and bonds; labor relations and inspection; project control, total quality management and ethics in construction management.

**CMGT-104 Construction Management II**

Utilizing pertinent case studies, this course focuses upon the planning and scheduling stages of the building process, with particular emphasis upon reading construction documents and basic estimating principles applied to small-scale, residential and commercial projects. Construction site procedures as well as techniques for estimating unit quantities and costs of materials, labor and equipment, are introduced, and given industry application utilizing building specifications and computer software.

**Prerequisite:** ARCH-427 or CMGT-102

### **CMGT-200 Construction Project Planning & Scheduling**

A study and application of the tools and concepts used in planning and controlling construction projects. Students employ the Critical Path Method (CPM) of project scheduling, resource leveling, and time-cost analysis using manual and computer-based solution methods to develop and maintain working project schedule models.

**Prerequisite:** CMGT-101 or ARCH-428 or permission of Program Director

### **CMGT-206 Building Systems**

This course introduces students to the foundation, structural, envelope, Mechanical, electrical, plumbing, and automation systems and their interaction in a functioning building facility. Emphasis is placed on value achieved through constructability, performance, and sustainability characteristics.

**Prerequisite:** CMGT-102

### **CMGT-208 Materials & Methods of Construction**

This course is an introduction to the materials, assemblies and methodologies of general construction organized around Construction Specifications Institute division format. Topics include site-work and excavation techniques and proceed through basic building systems in concrete, masonry, wood, plastic and steel along with interior and exterior finishes. Emphasis is placed on achieving design intent through appropriate construction techniques and sequencing. Case studies, site visits, ongoing project examples are an integral part of the course.

**Prerequisite:** CMGT-104

### **CMGT-304 Construction Safety & Risk Management**

This course familiarizes students with best practices for risk identification, assessment, and mitigation for construction businesses and projects. Students will examine case examples of construction industry businesses and construction project site conditions, identify and assess specific risks, and formulate management plans to mitigate and manage the risks. Particular emphasis is placed on OSHA compliance and worksite safety management.

**Prerequisite:** take CMGT-102

### **CMGT-306 Construction Site Operations**

This course familiarizes students with methods, procedures, and practices required for the effective management of field operations preparing students to assess construction project sites and prepare comprehensive site management plans. The course explores aspects of site management such as layout, logistics, sustainable practices, administration, and false work in a hands-on collaborative environment.

**Prerequisite:** CMGT-102

### **CMGT-308 Construction Safety Lab**

This one-hour course deepens student awareness and understanding of jobsite safety hazards, mitigation techniques, and OSHA Regulation compliance. Particular emphasis is placed on hands-on practical application of the principles covered in CMGT 3xx, Construction Safety and Risk Management.

**Prerequisite:** CMGT-102 **Co-requisite:** CMGT-304

### **CMGT-310 Construction Surveying**

This course presents the basic surveying principles and their applications in construction. Students are introduced the use of surveying equipment to achieve horizontal and vertical distance measurement, horizontal and vertical angle measurement, and computation of coordinates. The course includes additional topics like field data collection for site mapping, such as topographic surveys, boundary surveys, feature location, ground survey control, and traverse computations in addition to construction layout practices with the use of digital instruments.

### **CMGT-410 Principles and Practices of Heavy Construction**

This course is intended to provide students with an introduction to the principles and practices employed in heavy/civil infrastructure and marine construction. The course content is presented from a practical perspective focusing on the management of heavy/civil construction projects. The course is designed for construction management majors as well as those majoring in related fields and is intended to provide a broad understanding of heavy construction techniques and contracting.

**Prerequisite:** CMGT-200, 202 & 300

### **CMGT-450 Construction Management Seminar**

This seminar course is an opportunity for upper-level construction management students to explore emerging trends in the construction industry while integrating the knowledge and skills developed through their previous coursework. Seminar discussions will respond to readings, guest lecturers and project reviews presented by industry partners. The course includes individual and group research projects the results of which are also discussed during seminar meetings. Material and discussions will include topics such as professional practice, integrated project delivery, industry specific ethical challenges, sustainable practice, and career alternatives.

**Prerequisite:** CMGT-302 CMGT-300

## MS IN CONSTRUCTION MANAGEMENT

### **MCM-600 Construction Estimating & Scheduling**

Utilizing pertinent case studies, this course focuses upon the planning and scheduling stages of the building process, with particular emphasis upon reading construction documents and basic estimating principles applied to small-scale, residential and commercial projects. Construction site procedures, as well as techniques for estimating unit quantities and costs of materials, labor and equipment, are introduced, and given industry application utilizing building specifications and computer software.

### **MCM-602 Construction Information Modeling**

Technological advances within the construction industry demand that today's managers possess proficiency in current building methodologies and literacy in current computer software. This course concentrates upon the use of sustainable construction methods and materials to produce cost effective projects with emphasis upon resource efficiency, environmental protection and waste minimization. Innovative methods of documentation and digital techniques, principally Integrated Practice and Building Information Modeling (BIM) are given comprehensive coverage, relative to the application of the software to the actualization of the built form.

### **MCM-603 Construction Law: Roles & Responsibilities**

Current legal problems associated with the construction industry are investigated from management's perspective through consideration of the roles assigned to the various project participants. The entire building process from predesign to owner use is scrutinized, highlighting case law and statutory information, contractual relationships, licensing issues, design through build, bidding and procurement rules, mechanics liens, insurance and surety bonds, and liability awareness. Available methods of dispute resolution are evaluated, including negotiation, mediation, arbitration, and litigation with emphasis upon claim avoidance.

### **MCM-604 Project Finance & Cost Control**

Utilizing pertinent case studies, this course probes the economics of construction and analyzes project control systems used to effectively manage cost and time. Principles drawn from cognate business fields, specifically accounting, finance, and taxation, are given real-life application relative to construction projects of multiple types and scales. Key budgetary issues are examined in-depth, including financial statements and balance sheets, variance analysis and optimum cash flow methods, as well as efficient cost reporting systems. Additional topics include internal controls, financial analysis and presentation, contractor surety and lending, and fraud, with particular emphasis upon cost-effective methods to procure and deliver construction projects including lump sum, unit price, cost-plus, and design-build.

## **MCM-606 Construction Risk Management**

This course examines the key concepts, models, codes, tools and techniques used in managing risks within the architecture, construction and engineering industries. The course will focus on planning for the effective implementation of the risk management process, identification and qualitative and quantitative assessment of risks, appropriate strategies to respond to risks, and how to sustain the risk management process throughout the life of a construction project.

## **MCM-612 Advanced Construction Project Management**

Through detailed case studies drawn from contemporary practice, this course provides in-depth study of the principles and methods critical to the management and integration of the design and construction processes. Planning, scheduling, bidding, professional/client relationship, contractor selection and LEED accreditation are analyzed. Theoretical and practical aspects of project planning are charted, incorporating such essential steps as feasibility studies, estimating project costs, cash flows and cost control through critical path methodologies, risk analysis methods and current techniques for value engineering.

**Prerequisite:** MCM-600, MCM-602, MCM-603, MCM-604, MCM-606

## **MCM-614 Materials & Methods of Construction**

This course explores a management approach to evaluation and policies involving materials, assemblies and methodologies of general construction. Students are exposed to basic building materials, components, and systems and the appropriate techniques to evaluate their value, constructability, and other characteristics affecting project success. Emphasis is placed on the development of company policies regarding material selection, procurement, handling and assembly. Case studies and ongoing project examples are an integral part of the course.

## **MCM-616 Real Estate Development**

This course provides a step-by-step overview of the stages in environmentally and fiscally sustainable real estate and land-use development, considered from the developer's perspective. Topics range from conceptualization and market analysis; site acquisition, zoning, codes, infrastructure and tax incentives; project planning and design; economic feasibility and financing; the development team; the construction process; plus marketing and financial evaluation. Through cases and lectures presented by leading developers, students investigate the market-driven challenges and benefits of sustainable development with emphasis upon the role of the developer in the creation of an architecturally and ecologically superior built environment.

## **MCM-618 Heavy Construction Practices and Principles**

This course is intended to provide students with an introduction to the principles and practices employed in heavy/civil infrastructure and marine construction. The course content is presented from a practical perspective focusing on the management of heavy/civil construction projects. The course is designed for construction management majors as well as those majoring in related fields and is intended to provide a broad understanding of heavy construction techniques and contracting.

The BS in Construction Management is a 121-123 credit program with course offerings during the day and the evening. The MS in Construction is a 36 credit program with course offerings primarily in the evening and online. All classes are located on the East Falls Campus.

COURSE NO. COURSE TITLE

**CM 01301 Fundamentals of the Construction Industry I**

Provides a general overview of the planning, administration, management, and cost of construction projects and an introduction to the methodology used in executing specific designs. Emphasis is placed on the organization of construction firms, use and types of primary construction equipment, estimating and quantity take-offs, contractual and management systems, scheduling, project administration, and inspection of construction operations.

**CM 01302 Fundamentals of the Construction Industry II**

Introduces the design process and development of construction documents. It covers the standard design phases: programming, conceptual design, schematic design, design development, construction documents and construction administration, and the format and utilization of project manuals including contract specifications, the interpretation and analysis of engineering plans and specifications, and new technologies being used in design including Building Information Modeling (BIM) and sustainable (green) practices. The course also explores the various common project delivery methods.

### **CM 01304 Project Administration**

Provides exposure to and use of various types of project control systems for project efficiency and documentation. Students will learn how the submittal process operates and is monitored. They will also be shown a variety of tools used in tracking project documentation, and essential elements related to contract law and administration.

### **CM 01305 Construction Cost Accounting, Estimating & Finance**

Introduction to various costs of construction including direct and indirect project costs, comparison of hard and soft costs, job cost analysis and forecasting of cost-to-completion, labor, material and equipment expenses, cash flow, overhead, profitability, and general conditions costs. Students will learn research techniques used to create accurate estimating and bidding procedures.

### **CM 01303 Project Building Systems**

Students will learn the description and identification of the equipment and materials used in mechanical systems for heating, ventilating and air conditioning, electrical, plumbing, fire protection, piping, gas, lighting, water and waste water, conveyance, life safety systems, environmental, security, audio/visual, and building system controls. The course also provides an introduction to building structural and envelope systems.

### **CM 01306 Construction Project Planning & Scheduling**

Students will learn procedures used in project planning and scheduling that employ float methods of scheduling logic. They will examine the critical path series of activities to project completion, including the use of computer software applications for problem solving, and related tools, spreadsheets, and information management. Also covered are work breakdown structures, activity durations, status reports, resource allocation, re-planning, monitoring, and updating of projects. Students will develop project site logistics plans.

### **CM 01408 Industrial Relations in the Construction Industry**

This course examines various perspectives (union, management, government) on the collective bargaining system in place in the construction industry. Topics include the legal and regulatory environment, problem solving, and the roles of labor and corporations.

### **CM 01410 Building Construction Systems & Codes**

This course provides a conceptual understanding of functions and performance of structural building systems. The primary purpose of this course is to provide familiarity with use of construction code with reference to International Building Codes (IBC) 2012. For anyone in the field of construction or construction management it is necessary to know about the concepts and fundamental aspects of the code. As a result, the course is intended to provide an understanding of how the code was developed, how it is to be interpreted, and how it is applied to design and construction of buildings. The goal of the course is to make implementation of the code easier, and clearer to understand. Other than discussions on structural elements and their construction methods, the course covers issues such as use and occupancy, types of construction, fire-resistive constructions, interior finishes, building material, inspections, and tests.

### **CM 01409 Building Energy Systems for Construction Managers**

The Building Energy Systems for Construction Managers course provides a conceptual understanding of functions and performances of energy systems including mechanical, electrical, electronic, plumbing and transport systems in residential and commercial buildings. The course also provides information on integration between energy systems and other building components. While introducing the concepts of alternative energy sources, energy efficiency, structural implications of mechanical systems, indoor air quality, and environmental control strategies, the course familiarizes students with more recent and current efforts in sustainability and green building ideas. The course also introduces codes and standards relevant to energy devices used in building construction, such as National Fire Protection Association (NFPA), American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE), and National Electrical Code (NEC).

### **CM 01411 Construction Safety and Loss Prevention**

This course offers a practical guide for eliminating safety and health hazards from construction worksites. The Handbook of OSHA Construction Safety and Health addresses the occupational safety and health issues faced by those working in the construction industry. The course covers a vast range of issues including program development, safety and health program implementation, intervention and prevention of construction incidents, regulatory interpretations, understanding, and compliance, OSHA's expectations, health and safety hazards faced by those working in the construction industry and sources of information. The course also features updates for construction regulations, construction job audit, training requirements and OSHA regulations. It includes new record keeping guidelines and forms with additional material on focused inspections. Containing updated contact information for the newest agencies, the course also presents a model safety and health program, examples of accident analysis and prevention approaches.

### **CM 01407    Advanced Leadership & Communication**

This course is designed to teach students to become more effective leaders and communicators in the construction industry. Drawing on various case studies, students will examine ethical practices in the industry. They will define and role play effective communications strategies that simulate situations they may encounter within the industry such as general-to-subcontractor, corporate, and labor relations. Students in this course will also examine principles of negotiation and dispute resolution in the construction industry.

### **CM 01412    Capstone Course**

In the course, students will build on what they have learned in the major, integrating the theory and knowledge that they gained in class with practical experience in the construction industry. Capstone projects are developed through a series of project meetings between the student and program faculty.

- **REGISTRATION:**  
To register, please visit: [RowanU.com/Apply](http://RowanU.com/Apply) or call 856-256-4747.
- Rowan University's B.A. in Construction Management degree completion program provides those with an associate's degree or at least 60 credits with the remaining credits necessary to complete a bachelor's degree in this growing field while taking classes online. Applicants with less than 60 credits may work with an enrollment counselor to explore available options. This program is ideal for journeypersons and seasoned professionals in the construction industry as well as apprentices who are looking to develop leadership skills and advance their careers. The B.A. in Construction Management degree prepares individuals to supervise, manage, and inspect construction sites, buildings, and associated facilities.

COURSE NO. COURSE TITLE

**CMT 2124 Construction Methods & Materials**

Materials and construction processes of importance to the designer and constructor; construction equipment and methods of handling and placing these materials on the job.

**CMT 3121 Construction Estimating**

Estimating quantities of materials, labor, and equipment for various construction tasks; pricing of cost items; indirect costs; types of bids and bidding process; term project using actual construction blueprints; written and oral presentations; computer applications using spreadsheet program and Sage (Timberline) Estimating Software.

**CMT 3123 Construction Estimating Lab**

Introduction of the construction bidding process and construction documents; blueprint reading; programming and database generation with spreadsheet software; computer applications using Sage (Timberline) Estimating Software.

**CMT 3145 Structural Analysis**

The analysis of statically determinant structures under static and moving loads, techniques of determining the deflection of structural members, and analysis of indeterminate structures.

**CEE 2396 Environment and Safety Aspects**

Construction-related environmental issues, erosion control, wetland areas, habitat protection. Issues which relate to protective equipment, safety and potential hazards for construction workers, construction equipment operators, and others impacted by on-going construction activities; with laboratory

**CMT 2125 Construction Contracts and Specifications**

Analysis of construction contract law cases, analysis of selected contracts, bidding and contract award procedures, interpretation of specifications. Preparation of written reports and oral presentations are required.

**CMT 2271 Building Systems**

A basic study of the primary mechanical and electrical equipment and systems used in buildings. Design principles for selecting and sizing various systems are stressed throughout the course. Mechanical topics include plumbing, heating, ventilating, air condition, water supply, fire protection, and sanitary sewer systems. Electrical topics include basic principles of electricity, single and three phase systems, transformers, branch circuits and feeders, and residential and commercial illumination.

**CMT 3322 Construction Planning & Scheduling**

Field office planning, quality control plan development, construction planning and scheduling; term project using actual construction blueprints; written and oral presentations; computer applications using Primavera Project Planner Software.

**CMT 4335 Steel and Wood Structures**

Structural systems and framing plans are developed for simple wood and steel structures. Typical framing members are designed and analyzed for adequate strength and serviceability.

**CMT 4336 Concrete and Masonry Design**

Structural systems and framing plans are developed for simple concrete and masonry structures. Typical sub-systems and framing members are designed and analyzed for adequate strength and serviceability. The design of plain and reinforced concrete footings is included.

**CMT 4396 Capstone in Construction**

Synthesis of estimating, scheduling, and cost control for selected construction projects. Project management computer application. Preparation of written reports and oral presentations is required.

**CCET 4973 Construction Finance Management**

Construction cost accounting systems, job costing approaches, project budgeting, financial reporting procedure

- There are minimum 124 total credits required to complete the Bachelor of Science program in Construction Management Technology. Please register at Temple University –1810 Liacouras Walk 101, Philadelphia, PA 19122.

## CONSTRUCTION MANAGEMENT CERTIFICATE PROGRAM

The Construction Management Certificate Program (CMC) is a non-credit, certificate program designed to provide business management tools to existing and aspiring independent contractors in residential rehabilitation, remodeling, and light commercial work. The program takes 9 months to complete beginning in August and ending in May. The duration of each class on average is 5 hours with various extended times for lab sessions.

The course is ideal for construction contractors, technically skilled workers engaged in various trades such as carpenters, plumbers, electricians, apprentices, new companies in business for up to 4 years, novice construction managers and real-estate developers. There are no pre-requisites for the program.

CMC consists of 12 modules taught by practitioners in the construction industry. Each participant is required to attend all 12 modules and complete the following: a team project, a professional team resume, team project presentation and a Business concept paper. The individual courses below cannot be taken as a stand-alone course. All participants must be registered in the program in order to enroll in any of the modules.

*Fee: \$2,500 (\$2,300 if paid in full before class begins)*

The following 12 modules are included in the **Construction Management Certificate Program**:

COURSE NO.      COURSE TITLE

**FOXSBDC0012      Team Building & Business Management**

This is the introductory course to the Construction Management Certificate Program (CMC). Participants are engaged in a variety of exercises and activities designed for team building purposes. Participants are placed into teams based on their level of experience and personal goals. The activities are designed to develop a baseline assessment of each participant, show them how to work in a group setting and establish team goals. They are also exposed to various concepts such as business ethics, maintaining a good credit history, acceptable business practices in the industry, etc.

**FOXSBDC0013      Construction Blueprint Reading**

This course is designed specifically for those who desire basic knowledge of Print Reading (construction blueprints) or further knowledge of construction drawings. This course utilizes a combination of text, design plans, and structural sketches along with many realistic, hands-on activities and exercises. Upon completion of this course participants will be able to navigate construction documents and proficiently understand and translate the information the drawings depict. This course teaches interpretation and visualization of residential and commercial construction prints.

**FOXSBDC0014      Methods & Materials**

This course provides participants an overview of the materials and the methods used for the construction of residential and commercial buildings from the foundation to the roof. Upon completion of this course, participants will learn: the basic elements of the building process, characteristics of various building materials, application methods, and the role building materials play in the achievement of a more sustainable environment.

**FOXSBDC0015      Quantity Take-Off & Cost Estimating**

This course is designed to help contractors figure out the materials and labor costs associated with a construction project. Participants are taught to manually figure out the quantity take-off process with the aid of a variety of resources that are used as benchmarks throughout the process. One major objective of the course is to teach participants how to leverage the plethora of data that is readily available through cost estimating data sets during the life cycle of construction projects. Participants are also introduced to cost estimating software and data sets that help make the process more manageable.

### **FOXSBDC0016    OSHA Regulations**

This course is designed to inform construction industry workers and employers on how to recognize, avoid and promote safety and health hazards in industry work spaces. It promotes the major objectives stipulated by OSHA and ensures that workers in the construction industry are more knowledgeable about workplace hazards. This course also provides information regarding workers' rights, employer responsibilities, and how to process and file complaints when necessary. This course does not certify participants for OSHA 30-Hour Construction.

### **FOXSBDC0017    Accounting for Contractors**

This course covers tax implications based on the type of financing source utilized and the associated benefits where applicable. Participants will learn how to plan and develop budgets that will enable them to manage, fund, and finance construction projects. The goal of this course is not to prepare contractors to become accountants but rather to provide them tools that will help them understand the operations of their business from a financial perspective.

### **FOXSBDC0018    Loans**

This course helps contractors to familiarize themselves with the various types of financing available to fund a project. It teaches contractors when and how to utilize the various sources and the costs associated with these sources. Participants will learn about traditional and alternate sources of financing, how to make financial projections and learn of alternative methods of financing a projects.

### **FOXSBDC0019    Project Scheduling & Budgeting**

This course is designed to equip contractors with the tools that will help keep their project on schedule. Participants will learn how to communicate what work needs to be done, the type of resources necessary to perform and manage the job and the time frame and order in which the various complex steps need to be completed. Construction project managers will be able to effectively communicate the effort needed to deliver a completed project on time and on budget. This course provides an overview of the methods of accounting that are available to construction companies.

### **FOXSBDC0020    Contract Administration & Control**

Construction projects can be very complex in nature depending on the type of construction project being executed. Managing and monitoring quality of the finished product is absolutely necessary and has become critical for the ultimate success of large scale projects. Construction managers need to be able to optimize construction timelines and cost which require intimate knowledge of building practices and operations. This course will teach contractors how to manage quality and total control of a project.

### **FOXSBDC0021 Contract Law**

This course is designed to educate contractors on how construction contracts are formulated through the bidding process. It places emphasis on the construction specific applications of contract law. It covers the basic difference between private and public construction contracts. Participants learn how to distinguish between these different types of contracts and know what each requires. The elements of a contract will be explored as well as the risks involved and the consequences involved with non-performance on a contract. Various contract terms will be explained so that participants get a general understanding of these terms and how disputes can be settled through arbitration.

### **FOXSBDC0022 Pre-Business**

This course provides a comprehensive introduction to the fundamentals of starting and managing a business. Aspiring construction business owners will get an overview of the many issues involved in planning and launching a new business venture. Topics include personal and lifestyle issues of the entrepreneur/business owner, the legal, financial and tax implications of starting a business, business registration, government regulations and compliance issues.

### **FOXSBDC0023 Insurance & Bonding**

This course introduces participants to the various types of risks involved and how to plan effectively. Tools such as surety bonds provide financial security and assurance that contractors will be able to pay all parties involved including suppliers, laborers etc. This course covers the benefits of using surety bonds and the various types of contract surety bonds available to cover projects.

### **FOXSBDC0024 Team Project Meeting & Lab Session**

This course is one of the main requirements towards the completion of the Construction Management Certificate Program (CMC). Participants are placed into teams at the beginning of the program for the sole purpose of undertaking a major team project. The team project runs concurrently with all of the technical courses and the project is incorporated into the course work.

For additional information about the program visit the Temple SBDC website

**CONTACT** Phone: (215) 204-7814  
Email: [continuing-ed@udel.edu](mailto:continuing-ed@udel.edu)

The University of Delaware's Division of Professional and Continuing Studies (UD PCS) offers the following non-credit programs perfectly suited to the Building/Design Industry. Payment plans, early-bird discounts, military discounts and GBCA Members are eligible for up to 15% discount on most non-credit professional development programs offered by UD PCS.

### **PROJECT MANAGEMENT CERTIFICATE**

This popular non-credit certificate program starts you on the path to earning the Project Management Institute's (PMI®) Project Management Professional (PMP®) designation, giving you hands-on experience with practical tools, risk assessment, and team techniques that support effective project management.

Our instructors bring decades of project management experience to enrich classroom discussion and learning, and our program carries the PMI® Registered Educational Provider certification.

- Offered in Fall and Spring semesters, this 14-week program meets once a week from 6-9:15 pm
- UD's Wilmington campus on Wednesday nights
- UD's main campus in Newark on Tuesday nights
- Participants earn 42 project management education hours, enough to sit for the CAPM® or PMP® Exam
- For details, please visit: <http://www.pcs.udel.edu/project> or call 302-831-7601

## **PMP® AND CAPM® CERTIFICATION PREP CLASS**

This two-day exam preparation course is offered in partnership with the Delaware Valley Chapter of PMI®, and includes a customized study guide. This course prepares participants for the PMP® or the CAPM® exam.

- Offered from 8:30am-4:30pm on two Saturdays in July and January in Newark, DE
- For details, please visit [www.pcs.udel.edu/project-exam-prep](http://www.pcs.udel.edu/project-exam-prep)

## **PROFESSIONAL DRONE PILOT TRAINING ACADEMY**

UD-PCS introduces a comprehensive set of Unmanned Aircraft Systems (UAS) training to drone novices and advanced users alike. Whether you are a beginner seeking FAA Part 107 pilot certification or an advanced pilot responsible for vital construction and building design issues, UD has a drone training course that fits your needs and skill level.

- Schedule: All of UD PCS's Drone courses are offered on Saturdays and Sundays
- Location: UD's Arsht Hall, 2700 Pennsylvania Avenue, Wilmington, DE 19806.
- For details on each program, please visit: [www.pcs.udel.edu/drone](http://www.pcs.udel.edu/drone)

## **FOUNDATION CLASSES**

Ground School and FAA Part 107 Test Prep  
Foundations of Flight

## **ADVANCED CLASSES**

Professional Drone Pilot: Matrice 210 Operator Proficiency  
Professional Drone Pilot: D3P™ Drone Program Manager Proficiency Training  
Professional Drone Pilot: Night Operations and Thermal Imaging

## **BUSINESS PROCESS OPTIMIZATION USING LEAN SIX SIGMA**

This program presents both the problem-solving form of Six Sigma (the Define, Measure, Analyze, Improve and Control or DMAIC model) and Lean methodology to give students a comprehensive set of skills and tools. Mastering Lean Six Sigma techniques is a key component of solid quality assurance and project management.

- Schedule: This hybrid class is offered in Fall and Spring semester, with the first class on a full Saturday, followed by nine virtual classes and five face-to-face classes on Thursdays
- Location: Face-to-face classes held at UD's Wilmington, DE campus
- For details, please visit [www.pcs.udel.edu/sixsigma](http://www.pcs.udel.edu/sixsigma)

## **OCCUPATIONAL SAFETY TRAINING**

UD has partnered with the Delaware Valley Safety Council to offer three intensive training programs taught by OSHA Outreach Trainers. Our Certified Occupational Safety Specialist and Certificate for Occupational Safety Managers courses are designed for entry-level safety professionals and experienced safety professionals wishing to stay current in the field.

**For details on each program, please visit:** [www.pcs.udel.edu/occupational-safety](http://www.pcs.udel.edu/occupational-safety)

## **CERTIFIED OCCUPATIONAL SAFETY SPECIALIST (COSS)**

This course is designed for entry-level safety professionals as well as experienced safety practitioners wishing to stay current in the field. Safety training is applicable to a wide range of industries, including construction, manufacturing, transportation, energy and utilities, public safety and security, healthcare, food, government and human resources.

**Prerequisite:** high school diploma or equivalent.

- Schedule: 5 days, M-F, 8 am to 5 pm
- Location: 501 S. College Avenue, Newark, DE 19716

## **CERTIFICATE FOR OCCUPATIONAL SAFETY MANAGERS (COSM)**

This program benefits all organizational safety leaders involved in processes and decision-making as well as other managers and professionals charged with workplace health and safety for their organizations. Prerequisite: minimum two years of safety, health or environmental work experience.

- Schedule: 5 days, M-F, 8 am to 5 pm
- Location: 501 S. College Avenue, Newark, DE 19716

**GBCA Members are eligible for up to 15% discount on UD PCS non-credit professional development courses.**

# Earn Your **B.A. in Construction Management**

Rowan University's B.A. in Construction Management Online is designed as a degree completion program for individuals with experience in the construction field who already have an associate's degree or equivalent number of credits, and prefer to continue working while earning a degree. However, applicants with less than 60 credits may work with an enrollment counselor to explore available options. The program prepares individuals to supervise, manage, and inspect construction sites, buildings, and associated facilities.

- Created in cooperation with the North America's Building Trades Unions (NABTU)
- 100% online courses with opportunities to interact with faculty each week via web conferencing
- Affordable tuition
- Academic credit towards the degree may be awarded for prior work and experience

## **Non-Credit Professional Education Programs and Approved Courses**

### **PROJECT MANAGEMENT PROFESSIONAL PROGRAM**

Project managers are highly skilled, in-demand professionals throughout nearly every industry. Now, more than ever, businesses are becoming more project oriented and relying on talented project professionals to ensure goals are reached efficiently and effectively. Villanova University's Project Management Professional on-campus program includes foundational courses for current or aspiring project managers, advanced certification prep courses as well as a Tools and Topics course that provides a deeper dive into commonly used project management tools such as Microsoft Project.

#### **Courses**

- Project Management Essentials
- Applied Project Management (PMP Exam Prep)
- Project Management Tools and Topics

## **FACILITIES MANAGEMENT PROFESSIONAL PROGRAM**

This program is ideal for facility managers and sustainability facility managers looking to increase their expertise or gain industry recognized designations. Upon program completion, professionals have the opportunity to earn industry recognized designations - IFMA's Facility Management Professional® (FMP®) and Sustainability Facility Professional® (SFP) credentials.

### **Courses**

- Facilities Management
- Sustainability for Facilities Professionals

## **SUPPLY CHAIN MANAGEMENT** (Individual Course)

This stand-alone course is designed for professionals interested in earning the Certified Supply Chain Professional (CSCP) designation. The APICS CSCP exam content is used to help students prepare to earn this industry recognized credential, which helps position you as a supply chain expert. Course content and instructor focus is on practical approaches to global end-to-end supply chain management in an atmosphere that fosters peer networking.

# EXPERIENCE THE DIFFERENCE

## Build a Career with a Degree in Construction Management or Project Management from Drexel

Whether online or face-to-face, experience the Drexel difference. Courses are taught by faculty using practice-based curriculum from years of field experience, preparing students to serve as leaders and team members who add value through innovation.

The demand for professionals in construction management and project management is high. The development of relevant skills and an advanced education are important steps towards a rewarding and impactful career in these fields.

### Construction Management

- **B.S. in Construction Management**
- **M.S. in Construction Management** (*online*)
- **Graduate Certificates** (*online*)  
*Construction Management; Real Estate; Sustainability and Green Construction*
- **Undergraduate Certificates**  
*Fundamentals; Construction Science; Management Concepts; Customized/Independent*

### Project Management

- **Undergraduate courses in Project Management** (*face-to-face or online*)
- **M.S. in Project Management** (*online*)
- **Graduate Certificate** (*online*)  
*Project Management*
- **Ph.D. in Project Management**
